The model config **resnet18_config_0** uses 1 GPU instance with a max batch size of 4 and has dynamic batching enabled. 5 measurement(s) were obtained for the model config on GPU(s) 1 x NVIDIA GeForce RTX 3050 Laptop GPU with total memory 4.0 GB. This model uses the platform .

The first plot above shows the breakdown of the latencies in the latency throughput curve for this model config. Following that are the requested configurable plots showing the relationship between various metrics measured by the Model Analyzer. The above table contains detailed data for each of the measurements taken for this model config in decreasing order of throughput.
